

TWO 1KVT SETS FOR THE MERCEDES BENZ DEALERSHIP IN PARMA (ITALY)

WHERE:

Parma has a rich cultural heritage going back centuries and has been home to many artists who have helped shape the city, including Benedetto Antelami, Correggio, Parmigianino and the more contemporary artist Renzo Piano. The area is also famous for its culinary delights.

Parma ham and Felino salami are produced in the hills, while the Fragno truffle and Porcini mushrooms of Borgotaro are found in the woodland areas.

But the product that has been known worldwide for the best part of a millennium is Parmigiano Reggiano cheese.

CUSTOMER:

MAJITEKNO s.r.l.

THE REQUEST:

The new Mercedes dealership has a large showroom, a workshop for the inspection, testing and repair of vehicles, and a large outbuilding with part of the dealership where cars ready for delivery or ones already registered are kept.

This area needed to be equipped with a standard fire-fighting system.

Two KVT systems with axial flow vertical submersible pump, ideal for sprinkler and/or hydrant systems for commercial buildings, were chosen accordingly.

These two pumps (one with electric motor and the other with diesel engine, both sized to meet 100% of energy needs) are designed to be coupled together entirely to standard.

This further reduces the overall footprint of the system, minimising the surface area of the booth (the water reservoir is put underground).
